Framework Settings

Overridden

When using a framework for a new project, it will be automatically detected. As a result, several project settings are automatically configured to achieve the best result. You can override them below.

Configuration Settings in the current Production deployment differ from your current Project Settings.

>

Production Overrides

Save

Root Directory

The directory within your project, where your code is located. Leave this field empty if your code is not located in a subdirectory.

artifacts/skill-samurai

Include files outside the root directory in the Build Step

Enabled

Skip deployments when there are no changes to the root directory or its dependencies.

Disabled

Learn more about Root Directory

Save

Ignored Build Step

Vercel skips builds for commits with a previously deployed SHA. Override with a shell command that exits 1 (build) or 0 (skip).

Behavior

Automatic

Save

On-Demand Concurrent Builds

Skip the build queue and build deployments immediately. Usage costs apply per build minute.

Run all builds immediately

Skip the queue for all builds

Run up to one build per branch

New deployments within a branch are queued

Disable on-demand concurrent builds

Builds are queued, maximum of one at a time

This feature is available on the Pro plan

Build Machine

The next deployment of this project will fallback to Standard build machines, because your team has not selected a default build machine.
